About me

I am a passionate **Blockchain Fullstack Developer** particularly interested in newly-built all chains and high logic. I am an experienced IT professional with a unique combination of technical, consulting, and management skills.
I am also a keen open-source developer—contributing several smaller utilities and libraries. I take great care in the experience, high logic, and architecture-especially fancy interface and code quality of the things I build.
I have studied abroad at Oxford University, so I can communicate in fluent English
Quality-oriented professional with 8+ years of experience and proven knowledge of IT strategy, programming, and web design.

Education

2010/07 - 2014/11

Bachelor of Science in Information Technology
Kyoto University Kyoto, Japan

2014/12 - 2016/09

Bachelor of Science
University of Oxford Oxford, United Kingdom

Work experience

2020/12 - 2021/01

Blockchain Fullstack Dev
URL: https://shroomznft.io/

WORK: I designed this pages and I built this page by using **Next.js** and **Web3**. And I also coded the smart contract of minting NFTs-ERC721 by using **Solidity**.

2021/05 - 2021/07

Blockchain Fullstack Dev
URL: https://foxfinance.io/Marketplace

WORK: I updated this page.
Before I worked, NFT cards were not allowed to change their properties once made. Then I add the functions to CHANGE the price and quantities and MAKE new card. Of course, I also rebuilt the website using **Nuxt.js** and **Web3** and the smart contract of marketplace by using **Solidity**.

2021/08 - 2021/10

Frontend Dev
URL: https://wooshi.world/

WORK: In this project, I modified some components of this site.
This project was coded by **Shopify**. I worked on the internet to add **Web3** functions in this code and fixed 12 bugs.

2021/10 - 2021/11

Blockchain Fullstack Dev
URL: https://boredzillaclub.com/

WORK: In this project, I also designed the page and built this site by using **Next.js** and **Web3**. Furthermore, I built smart contract of minting the NFTs-ERC721 by using **Solidity**.

United Kingdom Travel for language training

United States Travel for joining to companies and discuss Technical Problems

Employment

2014/12 -
2018/02

Front End Developer
Wirecard Aschheim, Germany

- Requirements of the project include an implementation in Vue/Firebase with styling supported from Bootstrap and dynamic applications that can sort, filter data flawlessly using two-way data binding technique for overall performance.
- Encircle is a health insurance program financed and run jointly by the federal and state governments for low income people of all ages who do not have the money or insurance to pay for health care.
- The goal of the program is to provide medical and other health care services to eligible individuals so that they are able to remain as self-sufficient as possible.

2018/05 -
2020/02

Senior Full Stack Dev
Identiv Fremont,California, United States

- Used Hibernate as data mapping and persistence framework to implement data access abstraction.
- Fluency in HTML and CSS, and applied knowledge of client-side JavaScript, especially jQuery, React/Redux, Vue/Vuex, and other front-end libraries and frameworks.
- Worked with a React/AWS environment on a major enterprise product and it's already in production,Fiban.
- Supports and develops web application developers by providing advice, coaching and educational opportunities.
- Perform web development, template development, testing, debugging, integration, documentation and deployment in accordance with industry best practices.

2020/03 -
2021/09

Blockchain Fullstack Dev
Simpplr Redwood City, California, United States

- Engaged with clients wanting to enter the blockchain space, especially in the Ethereum ecosystem.
- Designed and deployed smart contracts for tokens and ICOs including token vesting, refund vaults, and multi-signature wallets.
- Implemented and deployed the graph for the staking contract tracking all events and allowing more advanced queries.
- Helped to integrate Ethereum and ER20 tokens into an exchange that is currently being built. It included address generation, token listing, and basic wallet operation related to ether and tokens using Web3.js.
- Researched the use of permissioned blocks and IPFS.
- Prototyped several optimizations including scheduling and specialized smart contracts.
